

Advanced Apex Project-1 (M.Sc. DS & AI)

Week-9 Final Submission Template

Instructions:

This is the final end-to-end project submission. Students should provide the complete workflow, including preprocessing, EDA, feature engineering (if applicable), basic model implementation, results, and interpretation.

Students are strongly encouraged to include markdown explanations, observations, and interpretations between code cells to improve readability, and reproducibility.

1. Project Title & Student Details

Mention project title and student details.

2. Problem Statement & Business Goal

Clearly describe the project problem and objective.

3. Dataset Description

Provide dataset source, features, target variable (if applicable), and dataset characteristics.

4. Data Preparation & Preprocessing

Describe all preprocessing, cleaning, transformations, and preparation steps performed.

5. Exploratory Data Analysis (EDA)

Provide important visualizations, trends, patterns, and insights.

6. Feature Engineering

Describe created/transformed features and justification.

If no additional features were required, explain why.

7. Basic Model Implementation

Describe the implemented model/workflow and methodology.

8. Basic Evaluation & Interpretation

Present outputs, basic evaluation results, observations, cluster interpretations, forecasts, or regression/classification observations.

9. Reproducibility & Documentation

Ensure the notebook/report is clear, organized, understandable, and reasonably reproducible.

10. Conclusion

Summarize key findings and business relevance.

11. References

Mention dataset sources, libraries, or references used.
